## EPA Releases Final Chemical Risk Evaluation for NMP

On December 23, 2020, the U.S. Environmental Protection Agency (EPA) released the final risk evaluation for N-methylpyrrolidone (NMP). Of the 37 conditions of use that EPA reviewed, EPA found that 26 present unreasonable risks to workers and consumers. These uses include an unreasonable risk to workers when domestically manufacturing or importing NMP, processing NMP for a variety of uses, and when used in a variety of industrial and commercial conditions of use. These uses also include an unreasonable risk to consumers from one consumer use. EPA found that NMP does not pose an unreasonable risk when distributed in commerce or in a variety of industrial and commercial and consumer applications. EPA also determined that NMP does not present an unreasonable risk to the environment and the general population. For more information, please read the full memorandum.
